
CONTENTS

PREFACE	xi
PART ONE FOUNDATIONS	1
Chapter 1 Computation Theory	3
1-1 Automata Theory	3
1-2 Lambda Calculus	8
1-3 Analysis of Algorithms	12
Chapter 2 Programming Languages	16
2-1 Syntax and Semantics	16
2-2 Pragmatic Structures	18
Chapter 3 Concurrency	25
3-1 Resource Conflict	25
3-2 Synchronization Mechanisms	28
3-3 Illustrative Examples	36
Chapter 4 Hardware	41
Chapter 5 Models, Languages, and Heuristics	44
5-1 Models, Languages, and Heuristics	45
5-2 Problem Domains	46
5-3 Primitives For Distributed Computing	48
PART TWO MODELS	55
Chapter 6 Shared Variables	57
Chapter 7 Exchange Functions	74
Chapter 8 Concurrent Processes	86
Chapter 9 Petri Nets and Data Flow	105
9-1 Petri Nets	106
9-2 Data Flow	114

Chapter 10	Communicating Sequential Processes	130
Chapter 11	Actors	145
Chapter 12	Indeterminate Applicative Systems	156
PART THREE	LANGUAGES	181
Chapter 13	Concurrent Pascal and Distributed Processes	183
13-1	Concurrent Pascal	184
13-2	Distributed Processes	191
Chapter 14	Ada	201
Chapter 15	Plits	230
Chapter 16	Synchronizing Resources and Cell	245
16-1	Synchronizing Resources	246
16-2	Cell	260
PART FOUR	HEURISTICS	277
Chapter 17	Distributed Databases	279
17-1	Database Control	280
17-2	Argus	290
Chapter 18	Distributed Problem Solving	301
18-1	Distributed Hearsay	304
18-2	Contract Nets	307
18-3	The Scientific Community Metaphor	309
18-4	Synthesis	316
PART FIVE	CONTRASTS AND COMPARISONS	323
Chapter 19	Contrasts and Comparisons	325
19-1	General Comparisons	325
19-2	Specific Comparisons	335
19-3	Basis Systems	339
	BIBLIOGRAPHY	347
	INDEX	357
